

# Mouiz Ahmed | Software Developer/Technical Systems Analyst Co-Op

Toronto, ON | (647) 513-3789 | [mouiza@my.yorku.ca](mailto:mouiza@my.yorku.ca) | [Linkedin](#) | [Github](#) | [mouizahmed.com](http://mouizahmed.com)

## SKILLS

**Programming Languages:** Java, Spring Boot, Python, HTML/CSS, JavaScript/TypeScript, SQL, C, C#, C++

**Frameworks:** React, NodeJS, ExpressJS, Angular, jQuery, NoSQL, Distributed Systems, Microservices

**Cloud Computing:** AWS, Microsoft Azure, Google Cloud Platform, Heroku, Docker

**DevOps:** Unit Testing, CI/CD, SDLC, Full-Stack, Agile, Documentation, UML, Git, Cross Browser Development

**Soft Skills:** Problem Solving, Organization, Communication, Eager to learn, Teamwork, Leadership

## EDUCATION

**B.Eng Software Engineering Co-Op**

2020 – 2025 (Expected)

York University — Lassonde School of Engineering, Toronto, ON

## PROJECTS

**CatchGPT | AI Text Detection Application**

March 2023

Web Application (Python, Flask, Hugging Face API, PyTorch, NumPy, HTML/CSS)

- A web tool that allows educators to determine if a piece of text was AI generated.
- Calculates the perplexity per sentence, and burstiness via Hugging Face's pre-trained GPT2 model.
- Based on these parameters, it determines if the text was, partially, or entirely AI generated.
- Note\* Results may not be entirely accurate and should be used in a more holistic approach.
- \*I plan on training my own model on various types of texts (Human/AI) for more accurate results.

**FlashStudy | Flashcard Study Application**

January 2023 – April 2023

Java Swing Application (Java, Maven, MVC Architecture, JDBC, MySQL Database, OpenAI API, CircleCI)

- Collaborated with a team to create study system to help users learn and retain information efficiently.
- Integrates AI using OpenAI's gpt-3.5-turbo model for definition autocompletion, fact check, and quiz question generation.
- Utilizes CircleCI to automate its build, test, and deployment processes (CI/CD).
- Followed the Agile throughout its development lifecycle which led to improved workflow and delivery.
- Extensive JUnit testing and documentation that follow best practices and industry standards.

**Course Review Application**

December 2022

Web Application (HTML, CSS, NodeJS, ExpressJS, ReactJS, MySQL Database)

- Each review is categorized by its school, faculty, course and professor stored within a MySQL database.
- Users can create an account to view and delete their posted reviews, implemented using JSON Web Token.

**Ponderful. | Group Decisions Application**

December 2022

Web Application (HTML, CSS, NodeJS, ExpressJS, ReactJS, MongoDB Database)

- Users can create a shareable unique session and generate a pool of options for their friends to pick from.
- Each session is uniquely identified by a UUID stored within MongoDB and linked to their option pool.
- Users pick between two options until a final selection is made followed by listing everyone's votes.

## EXPERIENCE

**Academic Peer Support**

September 2021 – December 2021

York University — Lassonde School of Engineering, Toronto, ON

- Smoothly transitioned new students at York University through professional mentorship and leadership, resulting in higher engagement, satisfaction, and a sense of belonging on campus.
- Provided academic and mental health support through referrals to campus resources, improving academic performance by 25% compared to the previous year.
- Hosted community-building events and workshops, fostering social connections and improving overall mental health.
